

CONNECTION ACCESSORIES

FOR PE PIPE FROM 20mm to 63 mm

MAIN FEATURES :

- The Male / Female reduction consists of a standard brass part which responds to the assembly of two parts with a thread at a distance of 2 nominal diameters.
- The male / female ring is suitable for any type of assembly of two parts by reducing the nominal diameter by several notches.
- The equal male double nipple is a connecting piece with threaded ends which is suitable for any assembly of two pieces of tap fittings, or which allows to connect two female fittings together, as well as a tap with a fitting and transform a fitting or a female output male output.
- The tee derivation allows a tapping made on the same drinking water network to be placed in a standby or blocked situation
- The male or female plugs are used to block any quick-tightening fitting or other fitting, in order to temporarily transform it into a shutter
